

The Early Birds pecking away at open source software with a testing framework

Team name: The Early Birds

Jan-Michael Carrington, Vincent Nguyen, Phillip Wilson
CSCI 362, Fall 2016

COLLEGE of
CHARLESTON

Introduction

In the software engineering class, we were assigned the task of finding an open source software we were interested in and create a testing framework to test the methods in the software.

The purpose of this semester long project was to give us experience with agile and iterative programming. It also taught us the importance of good documentation for later developpers to use or improve a software.

Matplotlib is a python 2D plotting library which produces quality figures in a variety of hardcopy formats. Since we all have not used Python since the first introductory coding class, this was a nice fresh reminder of how Python works.

Open Source Projects

At first, we started our work on the software Amari, however it quickly became evident with our current experience, we could not test it properly. We kept hitting walls of dependencies as we were trying to compile the source code from Github. We moved to pixi.ks, but discovered it was written in a language we were not familiar with, javascript. As a result, we flew to matplotlib.

The python 2D plotting library called matplotlib piqued our interest. Thanks to the amazing documentation provided by the software developpers of matplotlib, picking out methods to individually test was easy picking.

The Framework

The testing suite the team built focuses around the script runAllTests.py. It is ran from the command line. It goes through each test case file in the test case folder and runs the test on the specified method. An example test case file is shown below. The framework gets the result of the test and compares it to the expected output. The framework then returns a “Passed” or “Failed” value. The data is collected and exported to an automatically opened html.

```
jan-michael@janmichael-VirtualBox: ~/temp2/The-Early-Birds-master/TestAutomation
jan-michael@janmichael-VirtualBox:~/temp2/The-Early-Birds-master/TestAutomation$ ./scripts/runAllTests.py
Running tests please wait...

Tests complete.
jan-michael@janmichael-VirtualBox:~/temp2/The-Early-Birds-master/TestAutomation$
```

runAllTests.py started from the terminal

```
testCase04.txt (-/temp2/The-Early-Birds-master/TestAutomation/testCases)
Open Save

red
testCaseExecutable4.py
```

testCase.txt content

Test Case	Description	Component	Method	Input	Expected Output	Result
01	setting the color of a Line2D	Line	line.setColor()	blue	blue	Passed
02	setting the width of a line	Line	line.setWidth()	5	5	Passed
03	converting a color to its hex value	Colors	colors.to_hex(color)	'#000000'	red	Failed
04	Converting a color to its RGBA value	Colors	colors.to_rgba(color)	'(1.0, 0.0, 0.0, 1.0)'	red	Passed
05	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(1.0, 0.0, 0.0)'	'#000000'	Passed
06	Checks if c can be converted to RGB	Colors	colors.is_color_like(color)	True	red	Passed
07	Gives number of days after 0001-01-01 00:00:00 UTC plus one.	Dates	dates.num2date(num)	'0002-05-15 00:00:00+00:00'	500	Passed
08	Returns a number which gives the number of days since 0001-01-01 00:00:00 UTC plus one.	Dates	dates.date2num(date)	500.0	500	Passed
09	Converts days since 0001 to epoch.	Dates	dates.num2epoch(num)	24264316800.0	1000000	Failed
10	Returns a date range as float Gregorian ordinals.	Dates	dates.drange(date1, date2, delta)	735731.04166666663	'2015 5 12 2016 10 25'	Passed
11	converting seconds to days	Dates	matplotlib.dates.seconds(s)	1.0	86400	Failed
12	converting seconds to days	Dates	matplotlib.dates.seconds(s)	0.5	43200	Failed
13	converting seconds to days	Seconds	matplotlib.dates.seconds(s)	-0.05	-4320	Failed
14	converting seconds to days	Dates	matplotlib.dates.seconds(s)	7	604800	Failed
15	converting seconds to days	Dates	matplotlib.dates.seconds(s)	3	259200	Failed
16	copying properties from one line to another	Line	line.set_markersize(s2)	2000	2000	Passed
17	Returns seconds as days as a float number:	Dates	dates.seconds(s)	1.0	86400	Failed
18	Converting a color to its hex value	Colors	colors.to_hex()	'#6495ed'	cornflowerblue	Failed
19	converting a color to its hex value	Colors	colors.to_hex()	'#008000'	green	Failed
20	Returns hours as days as a float number:	Dates	dates.hours(h)	365.0	8760	Failed
21	Getting the color of a line	Line	line.getColor()	red	red	Passed
22	Converting a color to its hex value	Colors	colors.to_hex(color)	'#a52a2a'	brown	Failed
23	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 1.0, 0.0)'	'#008000'	Passed
24	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 1.0, 0.0)'	'#008000'	Passed
25	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 0.0, 1.0)'	'#0000ff'	Passed

Fault Injections

Injecting faults into the source code was a lot of fun. First spotting where the library was built, and then fiddling around in its source code to insert a random fault into a line.

The code was found at:

/usr/local/lib/python2.7/dist-packages/matplotlib-2.0.0b4_2382.g042ebc7-py2.7-linux-x86_64.egg/matplotlib

And the injections were inserted in dates.py on line 186 and colors.py on line 246. Getting to break code so it fails a test cases is a lot more entertaining than it sounds.

Test Case	Description	Component	Method	Input	Expected Output	Result
01	setting the color of a Line2D	Line	line.setColor()	blue	blue	Passed
02	setting the width of a line	Line	line.setWidth()	5	5	Passed
03	converting a color to its hex value	Colors	colors.to_hex(color)	'#000000'	red	Failed
04	Converting a color to its RGBA value	Colors	colors.to_rgba(color)	'(1.0, 0.0, 0.0, 1.0)'	red	Passed
05	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(1.0, 0.0, 0.0)'	'#000000'	Passed
06	Checks if c can be converted to RGB	Colors	colors.is_color_like(color)	True	red	Passed
07	Gives number of days after 0001-01-01 00:00:00 UTC plus one.	Dates	dates.num2date(num)	'0002-05-15 00:00:00+00:00'	500	Passed
08	Returns a number which gives the number of days since 0001-01-01 00:00:00 UTC plus one.	Dates	dates.date2num(date)	500.0	500	Passed
09	Converts days since 0001 to epoch.	Dates	dates.num2epoch(num)	24264316800.0	1000000	Failed
10	Returns a date range as float Gregorian ordinals.	Dates	dates.drange(date1, date2, delta)	735731.04166666663	'2015 5 12 2016 10 25'	Passed
11	converting seconds to days	Dates	matplotlib.dates.seconds(s)	1.0	86400	Failed
12	converting seconds to days	Dates	matplotlib.dates.seconds(s)	0.5	43200	Failed
13	converting seconds to days	Seconds	matplotlib.dates.seconds(s)	-0.05	-4320	Failed
14	converting seconds to days	Dates	matplotlib.dates.seconds(s)	7	604800	Failed
15	converting seconds to days	Dates	matplotlib.dates.seconds(s)	3	259200	Failed
16	copying properties from one line to another	Line	line.set_markersize(s2)	2000	2000	Passed
17	Returns seconds as days as a float number:	Dates	dates.seconds(s)	1.0	86400	Failed
18	Converting a color to its hex value	Colors	colors.to_hex()	'#6495ed'	cornflowerblue	Failed
19	converting a color to its hex value	Colors	colors.to_hex()	'#008000'	green	Failed
20	Returns hours as days as a float number:	Dates	dates.hours(h)	365.0	8760	Failed
21	Getting the color of a line	Line	line.getColor()	red	red	Passed
22	Converting a color to its hex value	Colors	colors.to_hex(color)	'#a52a2a'	brown	Failed
23	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 1.0, 0.0)'	'#008000'	Passed
24	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 1.0, 0.0)'	'#008000'	Passed
25	Converting a hex string to its RGB value	Colors	colors.hex2colorshex	'(0.0, 0.0, 1.0)'	'#0000ff'	Passed

Reflections

This was the team’s first time working on open source software and after completing it, we can confidently say we have learned the importance of good documentation. There is no way we would have gotten this far without the proper documentation provided to us.

If we were to do this once more, we would manage our time a lot better. We heavily underestimated the time it would take us to get each deliverable done even though Dr. Bowring clearly told us this would be a time consuming semester long project.

Unfortunately we did not have the skillset to tackle on projects like SugarLab and Amari, but even with a simple open source software like matplotlib, this was a very rewarding experience.

Getting to work on real projects rather than the little toying scripts we are assigned in the other coding classes was extremely refreshing and challenging.
